***To Wisconsin Medical Project et
Action for Health and
Development (AHEAD)***

Acknowledgement

On behalf of the Rector of Cheikh Anta Diop University, the Deen of the Faculty of Medicine, Pharmacy and Odontology, and on my name, I owe a debt of gratitude to Wisconsin Medical Project et Action for Health and Development (AHEAD) for the important donation of a list of equipment we received from AHEAD organization. This list of equipment including very useful and important equipment with several microscopes, monocular, binocular, bifocal, multifocal, and micro capillary centrifuge. I bring my thankfulness to all members of this organization particularly to Dr. NDIAYE, a Senegalese native who did think to his country for help to strengthen the health education and system by given this equipment. This equipment will contribute substantially to improve the practical training for UCAD faculty of medicine, faculty of sciences students and will also help to improve the patient's diagnostic capacity at Le Dantec hospital. By this, your organization understands the need to support and assist African institutions and laboratories to improve clinical treatment and outcomes. Your strategy will improve management of infectious diseases, to expand high-quality diagnosis and treatment for febrile illnesses.

I hereby express the total commitment of the management of the equipment for UCAD interest and will continue to work closely with you to seek for any other equipment that may hinder the implementation of the improvement of the education and health care management in our University and country.

On behalf of UCAD Rector, I strongly thank the to Wisconsin Medical Project et Action for Health and Development (AHEAD) which I believe would enable Africa contribute its quota to the development for education and health.

Sincerely Yours,

Dakar, July 24th 2014
